Portfolio

Objective

Results-driven Software Engineer with 7 years of experience in backend development, including 2 years of freelance projects. Skilled in designing and optimizing scalable, secure, and high-performance applications using modern technologies such as NestJs and Laravel. Adept at tackling complex backend challenges, improving system architecture, and delivering impactful software solutions. Seeking to contribute expertise and innovation to a forward-thinking team while continuing to grow professionally.

Professional Experience

11/2024 – Present
Cairo, Egypt

Software Engineer - Full time (Remote), Robusta Technology Group

- Developed and maintained highly scalable backend systems using both Laravel and NestJS, leveraging tools like Filament and Spatie to build efficient admin dashboards.
- Architected and secured RESTful APIs across Laravel (Sanctum/Passport) and NestJS environments for seamless integration with frontend applications and third-party services.
- Designed and optimized complex relational databases (MySQL/PostgreSQL), crafting efficient schemas and advanced queries to maximize system performance.
- Accelerated development and system design by integrating AI-powered tools (Cursor, Model Context Protocol) to write robust unit tests, produce technical documentation, and rapidly debug complex issues.
- Built and managed automated CI/CD pipelines incorporating linting, static and security analysis, dependency tracking, and Trivy scans to ensure reliable and secure deployments.
- Championed agile best practices by collaborating closely with Product, Frontend, and DevOps teams during sprint planning, technical estimations, and rigorous code reviews.
- Mentored junior developers on backend best practices, Eloquent optimization, package integration, and modern frameworks (Laravel and NestJS) to accelerate team growth.

07/2024 – 11/2024
Kuwait

Backend Developer - Part Time, Almasa

- Led a 3-developer backend team to build and launch an internal e-commerce dashboard and mobile API using Laravel.
- Introduced a domain-oriented architecture to decouple features and ensure the system could scale sustainably without turning into a monolith.
- Developed and shipped critical API features, including real-time chat, an integrated notification system, and secure payment processing via SadadPay.
- Conducted code reviews, coaching the team on structural best practices and system design rather than just line-level changes.
- Managed backend estimations and sprint planning, actively scoping and adjusting feature requirements to ensure consistent on-time delivery.
- Balanced technical leadership with active contribution, personally coding complex integrations like the real-time chat, notifications, and SadadPay.

01/2022 – 01/2024
Al Dakahlia, Egypt

Backend Developer - Full time, Codebase-tech

Over a two-year period, I contributed to the entire software development lifecycle (SDLC) of multiple complex projects, from architecture design to deployment, with a focus on backend development using PHP/Laravel and MySQL.

- Designed scalable, secure, and high-performance systems.
- Integrated third-party APIs and optimized databases for high-traffic efficiency.
- Resolved performance bottlenecks and managed complex system integrations.
- Collaborated with cross-functional teams to deliver reliable, on-time solutions.
- Contributed to technical decision-making for maintainable and efficient architectures.

09/2021 – 12/2021
Al Dakahlia, Egypt

Backend Developer - Internship, Waitbuzz

- Contributed to backend architecture design, ensuring seamless functionality and scalability.
- Optimized performance throughout the development lifecycle to meet production standards.
- Collaborated closely with senior developers to refine skills and deliver high-quality, productionready solutions.

05/2019 – 09/2021

Software Engineer, Freelance

- Delivered custom PHP backends for small and mid-sized client projects.
- Owned the client conversation as well as the implementation.
- Designed MySQL schemas and the application structure those backends were built on.
- Took each project from agreed requirements through deployment.
- Stayed with the client after launch for fixes and follow-on work.

Selected Project

Egypt Innovate

Egypt Innovate is Egypt's national gateway for entrepreneurship and innovation, connecting startups, investors, and ecosystem partners with resources and opportunities. The backend uses a layered architecture, built with Laravel 12, PHP 8.4, and MySQL 8.

Fitexpert

Fitexpert is a platform for fitness businesses, covering client management, nutrition and workout plans, progress tracking, and subscriptions. The backend uses a layered architecture, built with Laravel 11, PHP 8.2, and MySQL 8.

Elsafwa Resort

Elsafwa is a booking platform for resort stays across Cairo, from studios and chalets to apartments and villas, with search by destination, dates, and guests. The backend uses a layered architecture, built with Laravel 12, PHP 8.4, and MySQL 8.

Circles Academy

Circles Academy is a learning platform for clinical and sports nutrition and personal training, with accredited courses, practical training, and certificates. The backend uses a layered architecture, built with Laravel 11, PHP 8.2, and MySQL 8.

Itrainer

Itrainer is a fitness application for personalized diet and workout plans, progress tracking, and subscriptions. The backend uses a microservices architecture, built with Laravel 11, PHP 8.2, and MySQL 8.

Education

07/2019 – 07/2023
Mansoura, Egypt

Bachelor of Computer Technology and Commercial Sciences,
Nile Higher Institute

Awards

01/07/2022

Won Best Arabic App & Best Social Impact Awards In Apps Up 2022 Huawei Global App Innovation For the "Us and Them" App, Huawei

Concepts

Algorithms
Data Structure
Design Patterns
Computer Architecture
Software Architecture
System Design
SOLID
Cache Strategies
Containerization
Microservices
Event Driven Architecture
